

How to Make the Most of the Carbon Fee-and-Rebate Policy

This policy would put a fee on fossil fuel pollution and return the money raised to DC residents, spurring investment in a clean energy economy that benefits everyone.

Everyone Would Benefit With a Strong, Effective Rebate Policy

MONTHLY CHECKS: Every DC resident would receive a check in the mail each month with the money raised from this policy, known as a "carbon rebate."

YOU WIN: On average, every resident will receive more money in the rebate they would pay in additional fees — especially those who need it most.

Here's How to Avoid the "Fee"

Change Your Behavior

There's lots you can do to save energy in your home. Turn out the lights, turn down the heat, take shorter showers, and more.

Renewable Energy

Solar and wind energy are zero-carbon — so zero fees! Make the switch — it's easy.

Weatherization

Make your house more energy efficient by learning how to keep cold air out and warm air in (or vice versa!)

Public Transportation

Avoid gas fees by taking the bus or the metro. Or, rent a bike and get your workout for free!
